Next generation in precision

WT5000
Precision Power Analyzers
As renewable energy, electric vehicles and energy efficient technologies gain wider adoption, the need for reliability in testing efficiency, performance and safety has never been greater.

Changing application needs and evolving international standards call for custom measurements and consistent accuracy. In the WT5000 Precision Power Analyzer, engineers have a versatile platform that not only delivers reliable measurements today but, is ready for the challenges of tomorrow.

With its unmatched accuracy and modular architecture, the WT5000 empowers engineers to innovate with precision, flexibility and confidence to quickly bring their products from concept to market.

The WT5000 delivers:

**Reliability** – With a guaranteed accuracy of ±0.03%, harmonic comparisons up to the 500th order and custom computations, the WT5000 delivers multichannel measurements that you can trust.

**Versatility** – 7 slots for user swappable power elements and diverse options enable you to expand or reconfigure the WT5000 as your applications and their needs change. Additionally, the speed and torque from 4 separate motors are measurable.

**Simplicity** – With a full touchscreen experience, supported by hardware hotkeys and powerful software for remote measurements, connecting, configuring and measuring power has never been easier.
Precision at your fingertips

Multi-channel Measurements

Measure from up to 7 different power phases at 10 MS/s (18 bits). The high resolution, 10.1 inch WXGA display allows split screen viewing of up to 7 waveforms and can display up to 12 pages of diverse measurement parameters, making it ideal for efficiency tests of inverter driven motors, renewable energy technologies and traction applications like pumps, fans and electric vehicles. Measurements are also displayed in vector format or trending in time.

Intuitive operation

Operable by touch and/or hardware hot-keys independently, the WT5000 offers a seamless and intuitive experience that makes connecting, configuring and measuring easier than ever before. The 10.1 inch WXGA touchscreen delivers excellent noise immunity even in high noise environments such as motors and inverters.

Unmatched Accuracy

The WT5000 is the world’s most accurate precision power analyzer with a basic power accuracy of ±0.03%. Its accuracy specifications are guaranteed from 1% to 130% of the selected voltage and current ranges. With minimum influence of low power factor (0.02% of apparent power) the unit is also accurate at large phase shifts and frequencies.

• AC power accuracy: 0.01% of reading + 0.02% of range
• DC power accuracy: 0.02% of reading + 0.05% of range
• 10 MS/s 18 bit ADC

Custom triggers and computations

Define and use event triggers and custom computations as per application needs. The event trigger function allows users to set limits to capture readings that fall within or outside a specific range of power, current or other parameters. Users can also define and use up to 20 different expressions for custom calculations. Data that meets the trigger conditions can be stored, printed, or saved to a USB memory device.
Advanced Filtering

In addition to low pass frequency filters and line filters, the WT5000 features advanced filtering capabilities that provides unprecedented control to analyze even the toughest of waveforms with precision.

- Synchronization source filter: Instead of synchronizing to zero crossings, users can select any specific point of the synchronization source signal.
- Enhanced frequency filter: Allows users to simultaneously measure fundamental and switching frequencies without influencing any other parameter.
- Digital Parallel Path filters: Supported by a high frequency anti-aliasing filter, two separate line filters for normal and harmonic measurements ensures accuracy without aliasing in wide band and harmonic measurements. Users can limit the number of harmonic orders to eliminate attenuation in low bandwidth measurements.

Advanced Harmonic analysis

Evaluate and compare input and output harmonics of inverters, motors or power conditioners up to the 500th order. The WT5000 allows users to not only measure harmonics and power simultaneously but also offers side by side comparison of harmonics from two different input sources.

The effects of noise and aliasing are minimized by antialiasing and line filters with Digital Parallel Path technology allowing simultaneous power analysis of wide band and narrow band components.

Customize/configure your test bench

Evaluate motors, drives and inverters

Measure more than just electrical parameters. The motor evaluation function enables measurements of rotational speed and direction, synchronous speed, slip, torque, mechanical power, electrical angle and motor efficiency from an analog or pulse output of torque sensors or pulse outputs of rotation sensors.

Up to 2 motors can be measured per WT5000 when the determination of the rotation direction and the electrical angle is needed. However, a simple setting in the motor configuration menu, allows a single WT5000 to take synchronous measurements from up to 4 torque and rotation sensors enabling users to determine the overall efficiency from 4 wheel driven vehicles.
Up to 32 GB of internal memory

The WT5000 offers up to 32 GB of internal storage memory that can be used to store and recall various custom configurations and test setups. It can also be used to log large amounts of measurement data over long periods of time, behaving just like a logger. This large non-volatile memory makes it easy to store data without preparing any external media. Save Waveform/Numeric/Screen Copy data or Setting Information.

Communications

Not only does the WT5000 support GP-IB, USB and Ethernet communications but is also backward compatible with communication commands of previous models.

Extend your measurements with Master/Slave synchronization

When synchronizing 4 WT5000s with one master unit and 3 slave units, you have access to 28 input elements for electrical power measurements and up to 16 motor evaluation functions. The WTViewerE software will support this performance.
1. **Peripheral Device Connection**  
Two USB ports for connection to a storage, keyboard, mouse etc.

2. **10.1 inch WXGA Touch Screen**  
A 10.1 inch resistive touch screen delivers excellent noise immunity performance even in environments with high electrical noise such as motors and inverters.

3. **Display Format setting**  
Comprehensive range of display functions for power analysis, including numeric/waveform/vector/bar.

4. **Input element and range setting keys**  
Set the voltage and current ranges on up to 7 input elements.

5. **Store and Integration function key**  
Store and Integration function setting and execution key

6. **Communication functions**  
USB (3.0), Ethernet (VXI-11) and GP-IB

7. **Connectors for multi-unit synchronizations**  
One master and three slaves, a total of 4 units can be connected.

8. **RGB output**  
Video signal output for 1280 × 800 dots WXGA high resolution RGB display

9. **30 A input element**  
High accuracy element, from 0.5 to 30 A direct current and 1.5 to 1000 V direct voltage input. Users can install, remove or swap these input elements themselves.

10. **5 A input element**  
High accuracy element, from 5 mA to 5 A direct current and 1.5 to 1000 V direct voltage input. Users can install, remove or swap these input elements themselves.

11. **Motor Evaluation function 1 (optional)**  
Select Torque (Pulse/Analog) and A/B/Z (Pulse) inputs or two sets of Torque (Pulse/Analog) and A (Pulse) inputs

12. **Motor evaluation function 2 (optional)**  
Select Torque (Pulse/Analog) and A/B/Z (Pulse) inputs or two sets of Torque (Pulse/Analog) and A (Pulse) inputs  
* /MTR2 option requires installation of /MTR1 option.
The direct input terminal adopted male type large safety terminals preventing any mistakes as voltage input terminals. A dedicated safety terminal adapter set is attached as standard.
Next generation in precision

Through our work with engineers in the areas of R&D, Production, QA and Field Testing, Yokogawa recognizes the importance of reliable and precise measurements for making critical decisions in product development and compliance. For more than a 100 years, we have been pushing the limits of measurement accuracy and integrity with every generation of our measurement technologies.

With the WT5000, Yokogawa ushers in a new era of precision power measurements that provides engineers with the accuracy and the confidence to keep up with evolving international standards as well as the flexibility to adapt to ever changing application needs. Packing the very best in isolation, noise immunity, current sensing and filtering in a modular architecture, the WT5000 is an extensible measurement platform that unlocks precision power analysis for electromechanical systems in electric vehicles, renewable energy, home and office appliances and industrial equipment.

**Precision current sensing** – The coaxial construction of current shunts in the swappable 30 A input element ensures low resistance, low inductance, low impact on phase shift and minimizes heat dissipation. Heat flow pathways are optimized in the shunts and across the instrument to ensure even distribution and minimum effect on resistance.

**Advanced filtering** – Whether it is for custom synchronization of measurements, smoothening of signal fluctuations or simultaneous wideband and harmonic power analysis, the advanced filtering options of the WT5000 puts the user in control of his measurements without compromising on accuracy.

**Noise and isolation** – Special shielding and optical transmission protects against noise and crosstalk, Yokogawa’s isoPRO technology ensures fast data transmission (Max. 10 MS/s) and industry leading isolation to the input elements and is designed particularly for energy-saving applications, at high voltage, large currents and high frequency. Noise flow routes are optimized for minimum effect on the measurement circuitry.

Applications
Electric Vehicle development

Overview

Between 16 to 18% of the total charge of an electric car is consumed by electric drive system losses. Electric and hybrid car manufacturers therefore need to accurately evaluate motor and inverter control in order to achieve higher precision and greater efficiency. Additionally, the accurate analysis of inverter waveforms without interference from switching noise is a key part of evaluating the motor drive circuit.

Key requirements

- Multi-phase measurements from battery, inverter and motor
- Evaluation of motor characteristics such as torque, rotation speed and direction, slip and electrical angle
- Battery charging/discharging characteristics
- Harmonic analysis of inverter signals at various rotation speeds

The WT5000 advantage

With high accuracy, multi-channel power measurements, evaluation of up to 4 motors and harmonic comparison capabilities, the WT5000 helps automotive engineers improve conversion efficiency, shorten charging times and improve driving range.

Guaranteed accuracy in multichannel measurements

It enables simultaneous measurements of voltage, current, power, torque, rotation speed, electrical angle and mechanical power.

Motor evaluation and mechatronic efficiency

Measure rotation speed, torque, and output (mechanical power) of motors from analog/pulse inputs of rotation or torque sensors. A single WT5000 can be configured for synchronized measurements from up to 4 motors simultaneously.

Battery charging & discharging characteristics

Integration of instantaneous positive and negative values of energy allows the evaluation of battery charging and discharging characteristics.

Harmonics Analysis & comparisons

With the ability to measure harmonics up to the 500th order even at low rotation speeds, the WT5000 supports harmonic analysis without the need for an external sampling clock.
Renewable energy development

Overview

Energy generated by photovoltaic cell modules and wind turbines is converted from DC to AC by a power conditioner. Minimizing losses in these conversions is key to improve the efficiency of the overall energy system.

Key requirements

- Multi-phase measurements from boost converter, inverter and storage battery
- Evaluation of maximum power and instantaneous peak values
- Energy bought and sold in grid
- Battery charging/discharging characteristics
- Harmonic analysis of inverter signals at various generator speeds

The WT5000 advantage

WT5000 helps engineers working in the development of renewable energy solutions, to improve conversion efficiency by offering precision insights in charging, discharging, storage and overall efficiency.

Multi-channel Power measurements

Evaluate Power conditioner efficiency with simultaneous measurements from the inputs and outputs of boost converter, inverter, and storage battery. With measurement capabilities from up to 7 input elements the WT5000 is ideal for voltage, current, power, and frequency (for AC) before and after each converter, as well as converter efficiency and charging efficiency.

Instantaneous peak power

In photovoltaic power generation, an Maximum Power Point Tracker (MPPT) controller varies the voltage to maximize energy harvested from the solar panel. The WT5000 is capable of measuring not only the voltage, current, and power but also the voltage, current, and power peak values plus (+) and minus (−) sides, respectively

Energy Bought/Sold and Charged/Discharged

The WT5000 provides a current integration (q), apparent power integration (WS), reactive power integration (WQ), as well as effective power integration capable of integration in the power sold/bought and charge/discharge modes.

Harmonics Analysis & comparisons

Voltage fluctuations and harmonics flow into the power systems due to reverse power flow. The harmonic measurement function enables measurement of harmonic components to compute and display total harmonic distortion (THD) and harmonic distortion factor.
Inverter/motor drives

Overview
Motor drive technology has become more complex in recent years, pure sine-wave PWM is less common, and cases where the mean voltage differs greatly from the fundamental voltage waveform, are more frequent.

Key requirements
- Multi-phase measurements from battery, inverter and motor
- Evaluation of motor characteristics such as torque, rotation speed and direction, slip and electrical angle
- Harmonic analysis of inverter signals at various rotational speeds

The WT5000 advantage
With high accuracy, multi-channel power measurements, motor evaluation and harmonic comparison capabilities, the WT5000 helps engineers in motor and drive development to improve power consumption and conversion efficiency in inverter/motor drive systems.

Guaranteed accuracy across a wide range
The WT5000 guarantees a basic power accuracy of ±0.03%, between 1% to 130% of the selected voltage and current measurement ranges, at 50/60 Hz. Simultaneous measurements from the inputs and outputs of boost converter, inverter, and storage battery.

Inverter and motor efficiency
In addition to computing power conversion efficiency of inverter and motor (up to 7 power inputs), the WT5000 also allows the measurement of rotational speed, torque, and output (mechanical power) from the analog/pulse inputs of rotation or torque sensor.

Harmonics Analysis & comparisons
With the ability to measure harmonics up to the 500th order even at low rotation speeds the WT5000 supports harmonic analysis without the need of an external sampling clock.
Magnetic characteristics Testing

Overview

In transformer or reactor development, the WT5000 can be used to evaluate magnetic material characteristics using Epstein frame system.

Key requirements include:
- High precision measurements of primary coil current and secondary coil voltage is needed.
- High accuracy in low power factor is needed.
- The magnetic flux density B and AC magnetic field H are key parameters to calculate iron loss.

The WT5000 advantage

- Highest voltage and current accuracy
  WT5000 provides highest power accuracy:
  0.01% of reading + 0.02% of range (50/60 Hz)
- High accuracy at low power factor
  Effect of Power Factor of WT5000:
  0.02% of S (0.5 A or more)
  0.07% of S (200 mA or less)

Power calibration

Overview

For customers who use a large number of power meters, WT5000 can be used as a reference standard for periodic in-house calibration of power measurement instruments, such as the WT300E series and WT500.

Key requirements include:
- Sufficient power accuracy is needed for power measurement instruments.
- Power factor is adjustable, and the accuracy in low power factor is guaranteed.

The WT5000 advantage

- Highest power accuracy
  WT5000 provides highest power accuracy:
  0.01% of reading + 0.02% of range (50/60 Hz)
- High accuracy at low power factor
  Effect of Power Factor of WT5000:
  0.02% of S (0.5 A or more)
  0.07% of S (200 mA or less)
Specification of 760901, 30 A high accuracy element and 760902, 5 A high accuracy element

Element style and the installation
Element: Plug-in type
Number of slot: 7
Installed style: Modular style dedicated to WT5000 (main body)
Mixed installation: Possible for both 30 A and 5 A element together
Installation with empty slot: Possible, however, user cannot make use of elements after empty slot.
Live installation or pulling out: Impossible

Input
Input terminal type: Voltage: Plug-in terminal (safety terminal)
Current: Direct input: Plug-in terminal (safety terminal)
External Current Sensor input: Isolated BNC
Input format: Floating input, resistive voltage divider
Current: Floating input, through shunt
Measurement range
Voltage 1.5/3/6/10/15/30/50/100/110/500/600/1000 V (Crest factor CF3)
0.75/1.5/3/6/10/15/30/50/60/75/100/200/300/500 V (Crest factor CF6/CF6A)
Current: Direct input
760901: 500 mA, 1 A, 2 A, 5 A, 10 A, 20 A, 30 A (Crest factor CF3)
250 mA, 500 mA, 1 A, 2.5 A, 5 A, 10 A, 15 A (Crest factor CF6/CF6A)
760902: 5 mA, 10 mA, 20 mA, 50 mA, 100 mA, 200 mA, 500 mA, 1 A, 2 A, 5 A (Crest factor CF3)
2.5 mA, 5 mA, 10 mA, 25 mA, 50 mA, 100 mA, 200 mA, 500 mA, 1 A, 2 A, 5 A (Crest factor CF6/CF6A)
External Current Sensor input
Voltage 50 mV, 100 mV, 200 mV, 500 mV, 1 V, 2 V, 5 V, 10 V (Crest factor CF3)

Influence from common mode voltage
Voltage Continuous maximum voltage to earth (DC to 50/60 Hz): ±0.01% of range or less
Voltage: Instantaneous maximum allowable input (1 s or less)
Voltage: Continuous maximum allowable input
Voltage: Voltage
Current: Direct input
760901: Peak current of 150 A or RMS of 50 A whichever is lower
760902: Peak current of 30 A or RMS of 15 A whichever is lower
External Current Sensor input
Peak current of 90 A or RMS of 33 A whichever is lower
External Current Sensor input
Peak current of 10 A or RMS of 7 A whichever is lower
Peak current of 150 A or RMS of 50 A whichever is lower
Instantaneous maximum allowable input
Voltage: Peak voltage is less than 10 times of the range or 25 V whichever is lower
Continuous maximum allowable input
Voltage: Peak voltage of 1.6 kV or RMS of 1.5 kV whichever is lower
Voltage: Peak current of 30 A or RMS of 15 A whichever is lower
External Current Sensor input
Peak voltage is less than 5 times the range or 25 V whichever is lower
Peak voltage: Voltage
Voltage Input terminals: DC to 50/60 Hz, 1000 V CAT II
External Current Sensor input connector: DC to 50/60 Hz, 1000 V CAT II
Influence from common mode voltage
Voltage: 1000 Vrms for input terminal and case with the external current sensor input terminals shorted.
Voltage: Apply 1000 Vrms for input terminal and case with the external current sensor input terminals shorted.
AD converter
Simultaneous voltage and current input conversion
Resolution: 16-bit
Conversion speed (Sampling period): Maximum 100 ns

Lower frequency limit of measurement
Synchronized source period average method
Data update rate: 50 ms, 100 ms, 200 ms, 500 ms
Measurement lower limit frequency
45 Hz, 20 Hz, 10 Hz, 5 Hz
Data update rate
1 s, 2 s, 5 s, 10 s, 20 s
Measurement lower limit frequency
2 Hz, 1 Hz, 0.5 Hz, 0.2 Hz, 0.1 Hz

Digital filtering average method
FAST: 10 Hz
MD: 10 Hz
SLOW: 1 Hz
VSLOW: 0.1 Hz

Accuracy (six-month)
One-year Accuracy
Multiply the reading accuracy of the six-month accuracy by a factor of 1.5.
Conditions
Temperature: 23±5°C.
Humidity: 30 to 75% RH.
Input waveform: Sinusoidal wave.
Power factor: 1.
Common mode voltage: 0 V.
Crest factor: CF3
Line filter: OFF
Frequency filter: On (1 kHz or less when average method is Sync source period average)
Signal level of Sync source: Same as frequency measurement
After warm-up time (30 min)
After zero calibration of measurement range change under wiring with calibrators
Unit of 1 of below formulas is kHz
Input range
AD: 1 to 110% of range
DC: 0 to 110% of range

Voltage
DC: ±0.02% of reading + 0.05% of range
0.1 Hz ≤ f < 10 Hz: ±0.03% of reading + 0.05% of range
10 Hz ≤ f < 45 Hz: ±0.03% of reading + 0.05% of range
45 Hz ≤ f ≤ 60 Hz: ±0.01% of reading + 0.02% of range
66 Hz ≤ f ≤ 1 kHz: ±0.003% of reading + 0.04% of range
1 kHz ≤ f ≤ 10 kHz: ±0.1% of reading + 0.05% of range
10 kHz ≤ f ≤ 50 kHz: ±0.3% of reading + 0.1% of range
50 kHz ≤ f ≤ 100 kHz: ±0.6% of reading + 0.2% of range
100 kHz ≤ f ≤ 500 kHz: ±0.006% of reading + 0.5% of range

#### Influence of Line filter

- **Bessel sources LPFs; f < 1 MHz**
- **Voltage/Current**
  - Up to 100 kHz: Add ±(20 × f/fc) % of reading
- **AC measurement**
  - Up to 100 kHz: Add ±(40 × f/fc) % of reading
  - Refer to WT5000 (main body) line filter, if lower than 100 kHz of fc

#### Harmonic Measurement

- **Measurement target**: All installed elements
- **Method**: PLL synchronization method
- **Frequency range**
  - Fundamental frequency: 0.1 Hz to 300 kHz
  - Analysis frequency: 0.1 Hz to 1.5 MHz
- **PLL source**
  - Select the voltage or current of input elements, or the external clock.
  - Input level: See element specifications
  - The condition under frequency filter ON is the same as frequency measurement.
  - The condition on frequency filter OFF is different.
- **FFT points**
  - Select from 1024 or 8192
- **Window function**: Rectangular
- **Anti-aliasing filter**
  - Set with line filter and harmonic filter

#### FFT points 8192 (10 MHz)

#### Accuracy

- **Pll source input level**
  - 15 V or more of range for voltage input.
  - 200 mV or more of range for current input.
- **50% or more of the measurement range rating for crest factor CF1**
  - 100% or more of the measurement range rating for crest factor CF6/CF6A.
- **For 500 mA, 1 A, 2 A range, 20 Hz to 1 kHz**

### General specifications (including WT5000 main body)

#### Warm-up time

- About 30 minutes

#### Operation environment

- **Temperature**: 5 to 40°C
- **Humidity**: 20 to 80% RH (no condensation)
- **Operating altitude**: 2000 m or lower
- **Installation location**: Indoors

#### Storage environment

- **Temperature**: –25 to 65°C (no condensation)
- **Humidity**: 20 to 80% RH (no condensation)
- **Rated power supply voltage**: 100 to 120 VAC, 220 to 240 VAC
- **Allowable power supply voltage fluctuation range**: 90 to 132 VAC, 198 to 264 VAC
- **Rated power supply frequency**: 50/60 Hz
- **Allowable power supply frequency fluctuation range**: 46 Hz to 63 Hz

#### Power consumption

- **Maximum**: 560 VA

### Unit: mm

#### Rear view

- **30 A and 5 A High Accuracy Elements**
  - (760901 and 760902) include LAZER source inside.

#### Compliance

- **Class 1 Laser Product**
  - Laser No. 36203: Class 1 Laser Product (Basis: 1348-1991)
  - Laser No. 36204: Class 1 Laser Product (Basis: 1348-1991)
  - Laser No. 36205: Class 1 Laser Product (Basis: 1348-1991)

- **Compliance with IEC 60825-1:2007**
  - Application of Class 1 laser products (basis: 1348-1991)
  - Laser No. 36203: Class 1 Laser Product (Basis: 1348-1991)
  - Laser No. 36204: Class 1 Laser Product (Basis: 1348-1991)
  - Laser No. 36205: Class 1 Laser Product (Basis: 1348-1991)

- **Compliance with IEC 60825-1:2007**

  - Laser No. 36203: Class 1 Laser Product (Basis: 1348-1991)
  - Laser No. 36204: Class 1 Laser Product (Basis: 1348-1991)
  - Laser No. 36205: Class 1 Laser Product (Basis: 1348-1991)
Real-time control over multichannel power measurements

Easily monitor, control and download measurements from users PC. The WTViewerE software enables PC connectivity for all Yokogawa power analyzers such as the WT5000, WT3000E, WT1800E, WT500 and WT300E Series through Ethernet, USB, GPIB or RS232 allowing users to easily control, monitor, record, analyze, and save measurements remotely.

Test Application

- Automotive Power Train
- Wind Power Conditioner
- Inverters/Motors/Drives
- Home/Office Appliances
- Solar Power Inverter

Real-time control

WTViewerE allows users to remotely control and analyze measurements in real-time or previously acquired data. In online mode, users have real time control of measurements from each connected instrument, allowing them to remotely start or stop integration or collect live measurements. In offline mode users can analyze the latest acquired or previously stored data.

Versatile display for Multi-Channel Measurements

WTViewerE supports split screen displays for multichannel power measurements, allowing users to customize analysis. The software can simultaneously display up to 12 waveforms, 12 trends, 8 vectors and 6 harmonic bar graphs. Users can also save and load screen layout configurations.

Multi-unit Connectivity

WTViewerE enables synchronized measurements of up to four WT instruments in any combination regardless of model, element type or option. The software automatically detects connected instruments and displays a list from which users can modify wiring systems, measurement ranges, update intervals, synchronization sources, display formats and other measurement conditions.

With customizable split screen display of readings in numeric, bar, trend or vector formats, the WTViewerE simplifies the acquisition, storage and analysis of multichannel measurements from up to 4 power analyzers simultaneously.
**Accessories**

**Related products**

**AC/DC Current Sensor**

CT60/CT200/CT1000/CT2000A

**AC/DC Current Sensors**
- DC to 800 kHz/60 Apeak, DC to 500 kHz/200 Apeak, DC to 300 kHz/1000 Apeak, DC to 40 kHz/2000 Arms (5000 Apeak)
- Wide dynamic range: −2000 A to 0 A to +2000 A (DC)/2000 Arms (AC)
- Wide measurement frequency range: DC and up to 600 kHz
- High-precision fundamental accuracy: ±0.05% of reading ±30 μA
- ±15 V DC power supply, connector, and load resistor required.

**Current Clamp on Probe**

751552

Current Clamp on Probe
- AC 1000 Arms (1400 Apeak)
- Measurement frequency range: 30 Hz to 5 kHz
- Basic accuracy: ±0.3% of reading
- Maximum allowed input: AC 1000 Arms, maximum 1400 Apeak (AC)
- Current output type: 1 mA/A

A separately sold Safety terminal adapter set (761952), measurement leads (758917), etc. are required for connection to WT5000. For detailed information, see Power Meter Accessory Catalog Bulletin CT1000-00E.

**Current Sensor Unit**

751522, 751524

Current Sensor Unit
- DC to 100 kHz/1000 Apeak
- Wide dynamic range: −1000 A to 0 A to +1000 A (DC)/1000 Apeak (AC)
- Wide measurement frequency range: DC to 100 kHz (−3 dB)
- High-precision fundamental accuracy: ±0.05% of reading ± 40 μA
- Superior noise withstanding ability and CMRR characteristic due to optimized casing design 751522/751524 do not conform to CE Marking.

For detailed information, see Power Meter Accessory Catalog Bulletin CT1000-00E.

---

**Adapters and Cables**

**758917**

Measurement leads
- Two in a set.
- Use 758917 in combination with 758922 or 758923.
- Total length: 75 cm
- Rating: 1000 V CAT II, 32 A

**758922**

Small alligator adapters
- For connection to measurement leads (758917).
- Two in a set.
- Rating: 300 V CAT II

**758929**

Large alligator adapters
- For connection to measurement leads (758917).
- Two in a set.
- Rating: 1000 V CAT II

**758923**

Safety terminal adapter set
- Spring-hold type
- Two adapters in a set.

**758931**

Safety terminal adapter set
- Screw-fastened adapters.
- Two adapters in a set.
- 1.5 mm Allen wrench included for tightening.

**758917**

Current measurement using direct input terminal
- Black/Red two adapters in a set.

**758922**

Current measurement using clamp-on probe
- One 1 mA/A

**751902/03**

Safety BNC cable
- For input of the WT1800E to the motor evaluation function to a torque sensor.
- BNC-BNC 1 m/2 m

**761952**

Safety terminal adapter set
- Screw-fastened type adapters for 5 A element.
- Black/Red two adapters in a set.

**B9284LK**

External Sensor Cable
- To connect the external input of the WT1800E to the current sensor.
- Length: 50 cm

**366924/25**

BNC cable
- BNC-BNC 1 m/2 m
- For simultaneous measurements with 2 units or for an external trigger signal.

**701902**

Safety BNC cable
- To connect the external input of the WT1800E to the current sensor.
- BNC-BNC 1 m/2 m

**751903**

External Sensor cable
- For simultaneous measurements with 2 units or for an external trigger signal.
- BNC-BNC 1 m/2 m

---

*A burden resistor is required for the CT1000, CT200, and CT60.*

---

*Due to the nature of this product, it is possible to touch its metal parts. Therefore, there is a risk of electric shock, so the product must be used with caution.*

1. Maximum diameters of cables that can be connected to the adapters 758923: core diameter: 2.5 mm or less; sheath diameter: 4.8 mm or less; 758931: core diameter: 1.8 mm or less; sheath diameter: 3.9 mm or less

2. Use with a low-voltage circuit (42 V or less)

3. The coax cable is simply cut on the current sensor side. Preparation by the user is required.

Standard accessories
- WT5000: Power cord, Rubber feet, Cover panel B8216JA 7 sets, User's manual, expanded user's manual, communication interface user's manual, connector (provided only with /DA20).
- 760901/760902: Safety terminal adapter B9317WB/B9317WC (provided two adapters in a set times input element number) Safety terminal adapter A1650JZ/A1651JZ (provided black/red two adapters in a set, times 30 A input element number), Safety terminal adapter B8213YA/B8213YB (provided black/red two adapters in a set, times of 5 A input element number).

**NOTICE**

- Before operating the product, read the user’s manual thoroughly for proper and safe operation.

Yokogawa’s Approach to Preserving the Global Environment

- Yokogawa’s electrical products are developed and produced in facilities that have received ISO14001 approval.
- In order to protect the global environment, Yokogawa’s electrical products are designed in accordance with Yokogawa’s Environmentally Friendly Product Design Guidelines and Product Design Assessment Criteria.

This is a Class A instrument based on Emission standards EN61326-1 and EN50511 and is designed for an industrial environment. Operation of this equipment in a residential area may cause radio interference, in which case users will be responsible for any interference which they cause.

Due to the nature of this product, it is possible to touch its metal parts. Therefore, there is a risk of electric shock, so the product must be used with caution.

1: Use these products with low-voltage circuits (42 V or less).

2: The WT5000 will be supported soon.
